

PRODUCTS

Surfa Slick magnesium asphalt lutes are lightweight, rugged, and will provide a finish your customers will appreciate. Our asphalt lutes have the strength and spring of steel and yet are one third lighter than aluminum. The bar is joined to the handle with a heavy duty casting that creates a rigid connection superior to weaker braced connections. The lute bar's serrated edge is formed with slightly blunted points and rounded notches to permit material to pass through without jamming. Bars are available in three formats and handles are available in lengths ranging 6' to 8'4" and are also available in fiberglass. All of us at Surfa Slick remain committed to providing the best in asphalt lute products. So, when you think of asphalt lutes, think of Surfa Slick.

LS = LUTE SERRATED LP = LUTE PLAIN
